

Blower Rebuild & Exchange Programs

**Western Canada's number 1 choice for
vane pump & blower rebuilds since 1996.**

At Leduc Mechanical Industries, we offer you 2 choices when it comes to servicing the blower on your truck. Whether you need a blower back immediately or can save money by waiting, we have the right option for you.

Custom designed test bench to accommodate vane pumps or blowers.

Blower Rebuild Program:

Your first option is to leave your blower with us, and we service it back to factory specs. This is our standard rebuild program, which has been the more common choice of our customers since 1996. Whatever the cause of failure, we diagnose every aspect of your blower to refurbish to new condition. This is the less expensive option, and the better option if other parts of your truck need servicing at the same time.

Blower Exchange Program:

We also have our blower exchange program. Here, when time is not on your side and you must get your truck back working quickly, we take your old blower in as a core and sell you a fully bench tested rebuilt blower. You get back working quicker than waiting for a rebuild.

Whichever option you choose, certified technicians will service your blower back to factory specs, then run it on our custom built test bench to ensure every aspect of your blowers performance has been brought back to new.
